

Gram turns competitors green with envy...

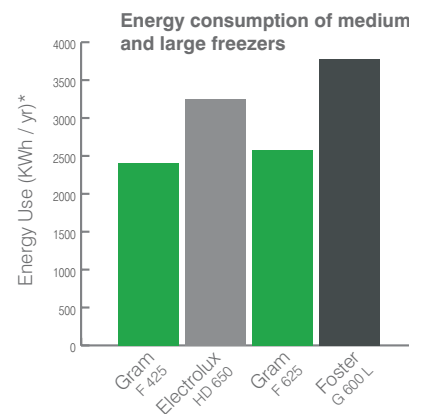

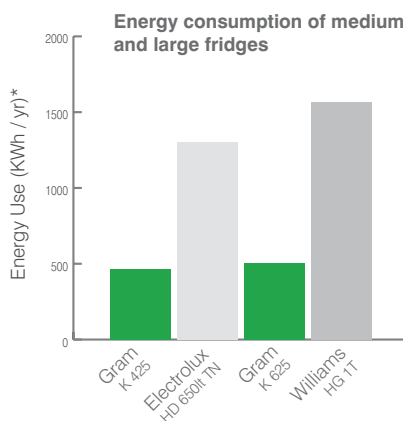

Gram tops the Energy Technology List - proving that their energy saving products are leagues ahead of the competition.

The Energy Technology List, issued by The Carbon Trust, now shows not only which products are energy efficient but also demonstrates energy consumption levels per year.

Gram has scored the highest energy efficiency ratings across all refrigeration and freezer categories.

Responsible and cost conscious operators will be able to purchase with peace of mind whilst benefiting from:

- ✓ Reduced running costs - potentially saving hundreds of pounds in running costs per year
- ✓ Capital allowance tax benefits – making savings up to £30 for every £100 spent on equipment listed on the ETL.
- ✓ Quality assurance that Gram products deliver the additional benefit of decreased life cycle costs

*Kwh per year is calculated from the official net volume and energy index per 48 hours published on the ETL website. Bar charts show Gram UK product from each category, compared with competitors of similar net volume.
